

# Kit To Light

*“Preselection of component variants with JIT (Just In Time) supply”*

**Kit To Light** is performed in supermarkets where all the variants of the components needed for the final assembly are stored.

The Kit To Light solution consists of prior grouping in a kit of a set of components or heterogeneous parts required to assemble a certain product. The kits are prepared "offline" in the supermarket by a team of operators and sent JIT to the exact point on the **assembly** line.

Kit To Light with **Pick To Light** devices optimises part picking time and ensures both quality (accuracy) and delivery accuracy, avoiding inefficiencies and line stoppages. A perfect method to support Lean Manufacturing techniques.

Kit To Light supermarkets are also complemented with **E-Kanban** solutions to avoid being out of stock, thus ensuring tense flow and JIT supply to production.

## BENEFITS

i

Our systems help to improve quality and cut delivery times.

ii

They reduce tension in the components supply chain and allow successful adaptation to personalised production and delivery deadlines.

iii

Flexibility and ease-of-use are key in our technology.
